Balance of Payments of the Kyrgyz Republic

"Balance of payments of the Kyrgyz Republic" is issued by the National Bank of the Kyrgyz Republic. The legislative basis for the balance of payments are the Law of the Kyrgyz Republic as of July 29, 1997 No. 59 "On the National Bank of the Kyrgyz Republic" and the Resolution of the Government of the Kyrgyz Republic as of November 3, 2000 No. 645 "On measures to improve statistics of the balance of payments of the Kyrgyz Republic". This document reflects last tendencies in external sector development and shows statistical data on the balance of payments, external trade, international reserves, external debt and international investment position, as well as construction methods of balance of payments and informational database. This document is published 4 times a year - in January, May, July and October and has 3 language versions: Kyrgyz, Russian and English.

In the current edition, revised data on portfolio investments and the income from them, starting in 2008, due to adjustments in accounting methodology. Also, due to improved statistical coverage supplemented by data on current and capital transfers. In connection with the revision of the NSC data, change data on services in terms of "trips". In the IIP amended in part accounting for assets of the Kyrgyz Republic in Centerra Gold Inc. Data on services, income from foreign investments, direct, portfolio and other investments are preliminary.

Last day for update of data for the present publication is May 20, 2013.

Annotation symbols and notes:

- ... means the absence of data;
- means, that indicators/ratios are equal to 0 (zero) or insignificant;
- is set between years or months (e.g., 1994-1996 or January-June) and means, that all years and months are covered by the shown dates.

Deviations in last digits may occur because of rounding numbers when summing up.

In regard with the possible changes in accounting methods or historical data, which are used in the given document, correction of earlier published data is acceptable. Therefore, 10 years period can be accounted as "open period".

Other publications of the National Bank of the Kyrgyz Republic

Annual Report of the National Bank of the Kyrgyz Republic

This document is an overall report of the National Bank for the last year. It includes summary on economic development of the republic and monetary policy, as well as the National Bank financial statements, general information and statistical reviews. It is published in 3 languages: Kyrgyz, Russian and English.

Bulletin of the National Bank of the Kyrgyz Republic

Informational publication includes statistical data on the basic macroeconomic indicators and economy sectors of the Kyrgyz Republic. It is published in 3 languages: Kyrgyz, Russian and English.

Inflation Report

This publication describes dynamics of consumer prices in the republic and regions, analysis of the main inflation factors, informs about the National Bank decisions on monetary policy and provides with inflation preview for the oncoming period. It is published quarterly in Kyrgyz, Russian and English.

Banking System Development Trends

The given document provides analysis of the banking system status of the Kyrgyz Republic as a financial intermediary, as well as the banking system stability by segment. It is published twice a year in Kyrgyz, Russian and English.

National Bank Normative Acts

The purpose of the document, called "Normative Acts of the National Bank of the Kyrgyz Republic" is to publish normative acts of the National Bank in order to provide commercial banks and public with normative acts of the National Bank and official information on the National Bank activity, as well as propaganda of the Kyrgyz Republic law. Presumable publication frequency is once a month in Kyrgyz and Russian languages.

Press-Release of the National Bank of the Kyrgyz Republic

"Press-release of the National Bank" describes current events, which take place in National Bank and provides with the major data on the financial market. It is published weekly in Kyrgyz and Russian languages.

Publications of the National Bank are distributed in accordance with the specifications approved by the Chairman of the National Bank. They can also be found on the National Bank web-site: <http://www.nbkr.kg>.

THE CURRENT STATUS OF THE BALANCE OF PAYMENT

Following the results of 2012, the overall balance of payment formed positive in the amount of USD 188.7 million.

Chart 1: Current Account
in percent of GDP

In the reporting period, increased negative balance of goods and services has caused increase in the current account deficit up to USD 1 430.6 million (22.1 percent to GDP). The current account deficit was financed by capital inflows on the capital account and the financial operations in the amount of USD 1 138.4 million.

According to the estimates of the National Bank, the current account deficit including additional estimates of the NBKR on re-export of petroleum products (see Box N2, page 21) amounted to USD 1 137.8 million (17.6 percent to GDP).

Box #1

Current account operations, savings and investments.

The balance of payment and international investment position result in accounts formation on the foreign economic activity of the country. The significance of recording international operations and residues of the country was conditioned by their influence on domestic economy, as the accounts of the foreign economic activity primarily reflect dependence of internal sectors on external world. One of such principal interrelations is dependence of the current account balance on the savings and investments of the country reflected in the following formula:

$$CA = S - I$$

where CA - current account balance

S - savings

I - investments (gross capital formation).

This formula indicates that any changes in the current account balance is reflected in increase of the savings against investments (BPM 6, Chapter 14).

Dependence of the current account balance on savings and investments can be reviewed in detail, if the private and public sectors are separated.

Savings and investments of any country consist of private and public savings and investments:

$$S = Sp + Sg$$

$$I = Ip + Ig$$

Thus, we receive the following formula:

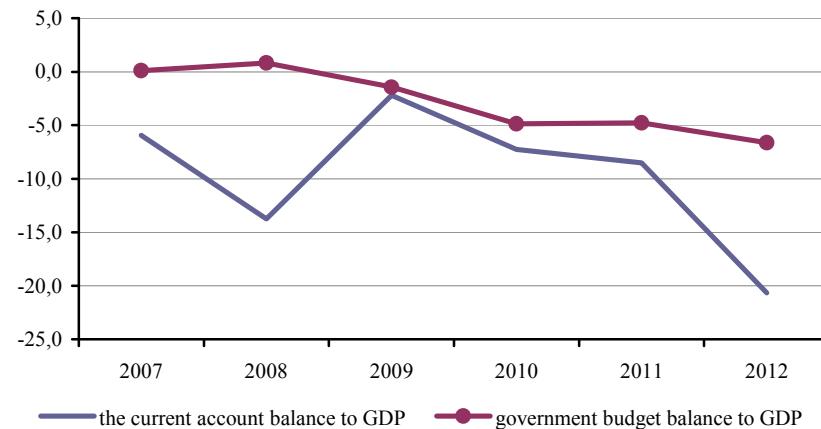

$$CA = (Sp-Ip) + (Sg-Ig)$$

where $(Sg-Ig)$ - state budget balance.

In the last 5 years, the example of the Kyrgyz Republic indicates that the current account deficit of the balance of payment conditions deficit of the national budget (so called "twin deficits"). This gives evidence that constant deficit of the current account operations reflects stable excess of national expenditures over inflows, thus, strict fiscal policy may be reasonable in this situation.

Chart 1: The current account balance and the state budget in 2007 to 2012

(percent of GDP)

However, it should be noted that the aforementioned formula does not reflect cause-effect dependence of current account deficit on the deficit of the national budget, as dynamics of private savings and investments ($Sp-Ip$) should be obligatorily taken into account.

The Kyrgyz Republic is characterized by the stable excess of investments over private savings (negative gap).

The level of private

investments in 2008 remained relatively stable (from 24.0 to 27.0 percent to GDP). Private sector savings are characterized by higher volatility, at that, the trend of stable decline was observed in 2009.

Table 1: The current account, the state budget, savings and investments

(percent of GDP)

	2007	2008	2009	2010	2011	2012
Current account balance to GDP	-5,9	-13,8	-2,2	-7,3	-8,5	-20,7
The balance of the state budget to GDP	0,1	0,8	-1,5	-4,9	-4,8	-6,6
Private savings to GDP	18,2	13,9	25,2	21,6	20,7	14,8 *
Private investment to GDP	24,7	26,1	24,7	26,8	24,7	27,3 *

Source: NSC data on savings, investment and the deficit of the state budget, these National Bank

*calculations National Bank

According to the estimates of the National Bank, in 2012, decrease in private savings against GDP by 5.9 percent accompanied by increase of investments to the private sector by 2.6 percentage points with simultaneous growth of fiscal deficit could contribute to sharp rise of the current account deficit in the country.

Shortage of domestic savings will result in the necessity to search for external sources of financing. According to the short-term prospects, current account deficit is not likely to have significant effect of the economy as a whole. However, long-lasting situation will leave our country behind developed neighboring countries, and will cause significant dependence on the rest of the world. It is necessary to take measures on competitive development of domestic production industry in order to decrease current account negative balance.

TRADE BALANCE¹

The **trade balance** of the Kyrgyz Republic has traditionally formed with a negative balance, and, following the

results of 2012, amounted to USD 3 045.9 million, having increased by 82.5 percent compared to 2011 and by 62.1 percent compared to the previous record high of deficit achieved in 2008.

The main reasons for deterioration in the trade balance are the following factors:

- a) decline in the export of gold;
- b) growth in the import of cars and transportation equipment.

Commodity concentration of foreign trade in the reporting period suffered

significant changes. Decline in the gold exports resulted in relative decrease of exported commodity diversification. Imported commodity assortment remained stable.

Table 1: Commodity concentration of trade*
(in percentage)

	2008	2009	2010	2011	2012
Export of goods	33,1	42,4	46,6	51,4	35,0
Import of goods	18,6	15,1	14,4	14,1	14,3

* excluding estimates of NBKR and NSC

The **external trade turnover** in FOB prices in the reporting period increased by 12.1 percent compared to 2011 and in terms of value amounted to USD 6 887.1 million. The index of economic transparency calculated as a ratio of trade turnover in the country and GDP have increased by 2.1 percentage points compared to the corresponding index of 2011 and constituted 106.5 percent. Change was caused by increase in the ratio between import and GDP by 10.6 percentage points with simultaneous decrease in the ratio between export and GDP by 8.4 percentage points.

Export of goods in FOB prices including additional estimates of the NSC and the NBKR (see Box N2 on additional estimates, page 21) has formed in the amount of USD 1 920.6 million (29.7 percent to GDP), having decreased by 15.3 percent as compared to the corresponding index of 2011, when the historical maximum was achieved in the number of comparable data for the last 5 years. Export of goods excluding additional estimates in FOB prices constituted USD 1 683.2 million.

¹ Since 2008, the data on trade balance in charts and tables are given including activity of tourist traders.

* in FOB prices, excluding estimates of NBKR and NSC

¹ Export of on-bord stock

The main factor of decline in exports was reduction of gold supplies (by 44.1 percent), occupying 33.4 percent of the total volume of exported goods in the reporting period. The reason for decline was decrease of gold output at the enterprises on exploration of gold-mining deposit "Kumtor" by 45.9 percent² due to technical complications (increased movement of ice and waste rock in the southeastern part of the pit). At the same time, the trend of the falling value amount of export was slightly flattened due to positive dynamics of world prices for gold in the reporting year³.

Export, excluding gold, constituted USD 1 120.9 million⁴, having increased by 15.2 percent compared to the corresponding index of 2011, however, having decreased by 2.9 percent compared to the record high within the range of comparable data based on the results of 2008. In the reporting period, the dominant part of the increase of exports, excluding gold was obtained both due to prices growth, and due to increase in the physical volume of ten largest goods, the share thereof constituted more than a half of the total export, excluding gold (see Table 2).

The most part of the country's export is **manufactured products** (metallurgical, textile and garment industry, the production of electrical equipment), agriculture and power generation.

The decline in **metallurgical production** by 44.0 percent⁵ affected decrease in gold export. The peak supply of gold for the same periods of the last 5 years was in 2011 (USD 1 006.2 million), against which the fall in supply

² http://www.kumtor.kg/ru/itogi_2012/³ In 2012, the average world price for 1 gold ounce amounted to USD 1668.9, having increased by 6.0 percent compared to the corresponding index of 2011; source: Reuters.⁴ In FOB prices, excluding additional estimates of the NBKR and NSC, in 2012, export, excluding gold with additional estimates of the NBKR and NSC constituted USD 1 427.7 million.⁵ "Social and economic situation in the Kyrgyz Republic (January-December 2012)", NSC.

in terms of value to USD 562.3 million in the reporting period was significant. The physical volume of export of specified products decreased by 48.6 percent, while average export prices increased by 8.7 percent.

* in FOB prices, excluding estimates of NBKR and NSC

In the reporting period, increase in supplies was observed on other exported products of metallurgical production, excluding ferrous waste and scrap, re-melting scrap ingots of iron and steel.

In the reporting year, there was growth of production output⁶ and export of certain products of **textile and garment industry**. In particular, the export of women's and girls' apparels of textile fabrics increased by 14.0 percent (by USD 11.8 million), clothing accessories - by 59.4 percent (by USD 7.7 million), men's and boy's knitted apparels - by 2.2 times (by USD 2.5 million), articles of apparel - by 69.7 percent (by USD 2.3 million). The largest decline of export in this sector was observed in the article "women's and girls' apparels, knitted or crocheted", the volume thereof decreased by 42.1 percent (by USD 8.4 million).

⁶ According to the data of the NSC, in January-December 2012, the volume of textile and garment industry increased by 12.5 percent.

Table 4: Export of major products of clothing manufacture*

* in FOB prices, excluding estimates of NBKR and NSC

As a result, growth rates for the group of "apparels and clothing accessories" article remained positive (increase by 9.4 percent), however, it slowed down compared to the corresponding periods of the last three years (increase by 71.8 percent in 2010 and by 14.1 percent in 2011). It should be noted that in the reporting period average export prices decreased on all types of apparels.

Despite adverse climatic conditions in the first half of the reporting period, according to the results of 2012, actual growth of **agricultural** output constituted 1.2 percent⁷. In the reporting year, compared to 2011, growth in the supplies of major share of agricultural products intended for export was observed due to increase of both physical volume and average export price. Thus, the supplies of fruits and nuts increased by 41.5 percent (or by USD 16.3 million), meat and meat products - by 2.4 times (by USD 3.5 million), cotton - by 9.2 percent (by USD 2.9 million), skins of bovine or equine hides and rawhide - by 29.3 percent (by USD 1.1 million). At that, the export of vegetables decreased by 7.2 percent (by USD 6.9 million), milk and dairy products - by 10.2 percent (by USD 2.4 million) and tobacco - by 8.9 percent (by USD 1.2 million).

⁸ Re-export is the export of foreign origin goods from the country (earlier manufactured in other countries or imported), where they were imported without any significant transformations, compared to their condition in which they were initially imported.

Based on the results of the reporting period, there were no significant changes **in the geographical structure** of export. Change in the dynamics of goods exported from the republic caused decrease in the geographic concentration of export by 5.5 percentage points, generally, due to non-CIS countries.

Table 7: Geographic export concentration*(in percentage)*

	2008	2009	2010	2011	2012
Export	39,1	39,8	40,1	49,9	44,4
CIS	55,6	55,0	61,6	56,4	56,7
Non-CIS countries	55,0	54,0	51,9	72,8	69,3

* excluding estimates of NBKR and NSC.

Despite decline in the gold exports, Switzerland remains the major trading partner of the country, occupying 49.8 percent of export. Growth in export of other inorganic chemical substances affected increase in the share of Kazakhstan from 20.2 to 36.8 percent. Despite decline in the cost amount of export to Russia by 23.0 percent; its share remains at the level of 19.9 percent for two years. Generally, during the reporting period, the Kyrgyz Republic exported products to 86 countries of the world (in 2008 - 67 countries).

The geographical distribution of the exported goods indicates that, excluding gold, the CIS countries are the main markets for domestic goods. High geographic concentration is evident on almost all commodities and commodity groups, primarily on gold, vehicles for cargo transportation, other inorganic substances and diary products, more than 95.0 percent of their supplies are carried out to one country. The consequence thereof may be the dependence of export from the Kyrgyz Republic on the economic situation and trade policies of individual countries.

NSC data at c.i.f. prices

In the reporting year, cars and transportation equipment (25.1 percent) had the largest share **in the commodity structure** of import, having increased by 2.4 percentage points as compared to the corresponding index of 2011. In this group, the pre-owned passengers cars have significant share, in the reviewed period, the cost amount of their export increased by 30.5 percent (increase due to physical volume). Some goods in this group are partially imported for further re-export: vehicles for cargo transportation and special purpose motor vehicles, spare parts and accessories of the motor vehicles, aircrafts and associated equipment, etc.

The share of the second largest group of imported goods - mineral fuels - decreased from 22.8 to 21.7 percent, despite increase of the cost amount by 20.0 percent, primarily, due to growth in the supplies of petroleum products.

In the reporting period, there was increase in the volume of imported **petroleum products** by 22.1 percent (by USD 184.5 million). The aforementioned growth resulted from increase in the physical volume of import by 15.9 percent compared to the corresponding index of 2011, generally, conditioned by the opportunity of duty-free import of oil, petroleum and lubricants from the Russian Federation. At that, the actual contract prices for imported petroleum products increased by 5.4 percent.

Besides oil, petroleum and lubricants, a significant share in this group is occupied by natural gas and coal, their supplies increased by 13.1 and 17.1 percent respectively.

The share of manufactured goods classified by material type did not change significantly and constituted 16.2 percent of the total volume of imported goods. More than one-fourth of this group is occupied by cast iron and steel, their average annual growth rate of import constituted more than 55.0 percent for the last two years. The other significant goods of this group include rubber tires, textile fabrics, various metal products, etc. In the reporting period, growth of cost amount was observed on almost all other large goods of this group.

There were not significant changes in the **geographic distribution** of import in the reporting period. Geographic concentration index of import increased by 0.2 percentage points and indicated slight increase in the share of main partner-countries in 2012.

Table 14: Geographic import concentration

(in percentage)

	2008	2009	2010	2011	2012
Import	43,2	43,6	42,2	42,1	42,3
CIS	71,0	67,2	67,7	68,8	69,8
Non-CIS countries	44,2	49,4	47,3	47,3	48,0

* excluding estimates of NBKR and NSC.

The country's dependence on energy carriers, consumer goods and some types of raw materials condition the dominant share of these goods imported from Russia (33.2 percent), China (22.5 percent) and Kazakhstan (9.7 percent). Generally, import in the reporting period was carried out from 139 countries of the world (in 2008 - 114 countries).

Import of basic food products was generally carried out from the CIS countries. The largest groups of food products, such as unmilled cereals and their products, sugar, vegetable oils and other food products are imported from these countries. Petroleum products are also supplies from the CIS countries. Due to possibility of duty-free imports of oil, petroleum and lubricants from the Russian Federation, 96.7 percent of petroleum products were imported from this country in 2012. The share of Kazakhstan, which extended a temporary ban on the

export of light petroleum products till the end of 2012⁹, has reached its minimum in the last 5 years (1.6 percent).

The share of non-CIS countries is more evident in the structure of imported non-food consumer products: the aggregate share of China and Turkey in the supplies of clothing reached 96.4 percent, процента, in the import of footwear - 82.4 percent. The import of cars from Japan, the USA and Germany constitutes 57.1 percent.

⁹ Resolution of the Government of the Republic of Kazakhstan N1681 "On imposing temporary ban on export of light distillates, kerosene products and gas oils" dated December 30, 2011; Resolution of the Government of the Republic of Kazakhstan N886 "On imposing temporary ban on export of light distillates, kerosene products, gas oils and other petroleum products" dated June 29, 2012.

Box N2**Additional estimates of the balance of payment of the Kyrgyz Republic.**

For the purposes of more comprehensive recording of separate indices of the balance of payment not covered or incompletely covered by the official statistics ,the National Bank of the Kyrgyz Republic uses additional calculations on the following indices:

- ◆ **Additional estimates of the export of agricultural products.**

The National Statistical Committee, for the purposes of statistical estimates of the agricultural products volume not completely covered by the official methods of statistical and customs records, performs additional calculations of the agricultural export. Additional calculations are fulfilled once a year according to the balance method on the basis of the following formula¹:

$$X^A = R - U$$

Where X^A - unrecorded export of agricultural products;

R - resources (production + import);

U - use (individual consumption + industrial consumption + export + losses).

- ◆ **Additional estimates on Manas Transit Center.**

According to the 5-th edition of the manual on the balance of payment and international investment position, which is a methodological basis for compilation of the balance of payment of the Kyrgyz Republic, the enclaves of the foreign states, such as embassies, military bases and international organizations are rather residents of the country of origin than the residents of the territory where they are physically located. Thus, their operations (such as purchase of goods and services) with the residents of the country where they are located are considered as international transactions and are subject to recording in the balance of payment.

Herewith, the National Bank fulfills additional estimates of the goods and services purchased by the Manas Transit Center from the residents of the Kyrgyz Republic (export of goods and services):

1. Business services (services on lease of land plot and real estate rendered by the government and residents of the Kyrgyz Republic);
2. Public services, which generally include the value of goods and services purchased by the embassies, consular agencies and military bases of other states, as well as personal expenditures of the employees (non-residents) of the aforementioned enclaves and members of their families in the territory of the Kyrgyz Republic;
3. Goods purchased by the Manas Transit Center from the residents (for example, construction materials, machinery, food products, etc.)

- ◆ **Additional estimates of remittances.**

The data of the National Bank on money transfers of migrant workers include remittances forwarded via money transfer systems and bank accounts, as well as via the PE "Kyrgyzpochtasy". The National Bank receives these data in the records of the commercial banks and the Ministry of Transport and Communications of the Kyrgyz Republic.

¹ Approved statistical estimates methods of unrecorded exports of agricultural products are posted on the web-site of the National Statistical Committee of the Kyrgyz Republic.

Additionally, the National Bank fulfills additional calculations of the share of remittances, which could be imported by the individuals as a cash (by migrants, their relatives, friends, etc.) and which is recorded in the total amount of remittances of the migrant workers. Additional calculations are based on the results of previous surveys and calculations and are fulfilled to the total amount of remittances net inflow (gross inflow minus gross outflow), without geographic split. In 2012, coefficient of additional calculations constituted 10.0 percent of the net inflow of remittances.

All aforementioned additional calculations of the National Bank are included in the data of the balance of payment (see line 2 in Table 1).

◆ **Additional estimates of the petroleum products.**

Moreover, in 2012, taking into account considerable increase in the import of petroleum products to the Kyrgyz Republic, which was not properly reflected in GDP growth, the National Bank fulfilled additional estimates of the unofficial re-export of light petroleum products from the Kyrgyz Republic to the neighboring countries.

Thus, deficit of the current account of the balance of payment, including additional estimates on re-export of petroleum products, in 2012 could amount to USD 1 137.8 million or 17.6 percent to GDP (see line 1 in Table 1).

BALANCE OF INTERNATIONAL SERVICES

The increased volume of foreign trade in the Kyrgyz Republic was supported by increase in the turnover of international services, which, according to the results of 2012, increased by 21.0 percent, reaching the level of USD 2 761.9 million (42.7 percent to GDP).

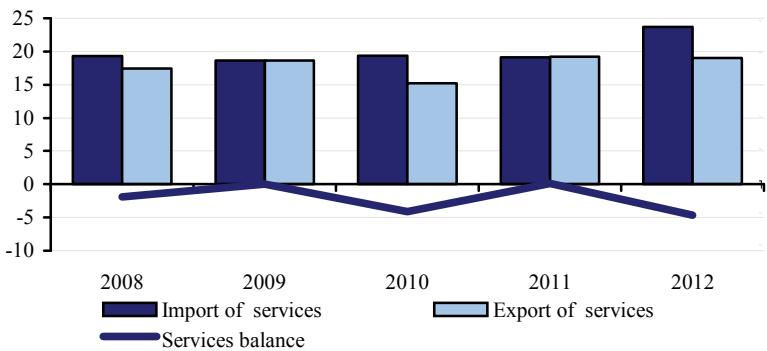

Chart 3: External service and goods trade*
(in millions of US dollars)

* including estimate of NBKR and NSC

In the reporting period, **export of services** reached USD 1 230.1 million, which corresponds to 64.0 percent of goods export. **Import of services** amounted to 30.8 percent of import of goods and formed in the amount of USD 1 531.9 million.

Chart 4: Balance of International services
in percent of GDP

foreign nationals during their stay in the territory of the Kyrgyz Republic (9.0 percent). In the dynamics of recent years, the largest decline in the sphere of services related to travels was in 2010, when the turnover of services on this article decreased by USD 554.8 million. However, the previous volumes of turnover have been restored and are still growing: the total turnover of services on travels in 2012 increased by 18.4 percent and reached USD 1 256.6 million.

In the dynamics of transport services for the last 5 years, decline that occurred in 2009-2010 was overcome in 2011 and continued growing in the reporting year. The negative balance of USD 461.7 million, formed on the transport services in 2012, was the result of significant increase in the imports of services in this article on the background of slight increase in export (28.3 and 7.2 percent, respectively). Growth of import was primarily conditioned by increase in the services of railway and automobile transport (by 31.9 and 25.7 percent, respectively),

Balance of international services (neutral presentation of the balance of payment) developed negative and constituted USD 301.8 million against its positive value in the amount of USD 5.8 million in 2011. Thus, deficit of the balance of services reached maximum in a series of similar data for the last 5 years. The outpacing import of services (by 34.6 percent) compared to the increase in their export (by 7.5 percent) contributed to it.

In the reporting period, the largest articles, accounting for 87.3 percent of the total turnover of international services, were travels, transportation and business services.

The balance of the "travels" article traditionally formed with a surplus, which in the reporting period decreased by 36.6 percent to USD 139.2 million. More dynamic growth (32.8 percent) was observed on the import of services, compared to the services provided to

while, other transport services and aircraft services contributed to growth of export, having increased by 5.1 times and by 4.5 percent, respectively.

Net export of business services, the value thereof was not stable in the last reporting years, was observed in the reporting year with a negative value in the amount of USD 29.6 million (USD 65.8 million with a positive value in 2011). The main factor was surge in import of business services (by 2.0 times), which was primarily preconditioned by growth of consulting services by 2.7 times. The export of business services as compared to the base period slightly increased (by 8.3 percent).

INCOME

According to the results of 2012, the balance of "income" article has traditionally formed negative and constituted USD 144.4 million, having decreased by 78.1 percent as compared to the corresponding index of 2011.

This trend is mainly due to reduction of income of direct foreign investors from investing activity in Kyrgyzstan, which is reflected in the decline of reinvested profit of enterprises by 84.0 percent (from USD 475.3 million to USD 75.8 million). The volume of distributed income of direct investors decreased (by 92.7 percent) and constituted USD 9.8 million to USD 133.9 million in 2011. As a result, the balance of income on direct investments declined by 86.0 percent and constituted USD 85.6 million.

In the reporting period, there was increase in payments of interests on earlier received loans by 18.5 percent (to USD 47.0 million), primarily due to increase of payments on private loans unguaranteed by the government. It contributed to increase in the deficit of "incomes from other investments" article by 55.6 percent (to USD 29.9 million).

In the reporting period, the balance of "remuneration of labor" article formed negative and constituted USD 28.9 million (decline by 1.6 percent). This trend was conditioned by decrease in aggregate incomes of non-residents received from labor activity in the Kyrgyz Republic.

TRANSFERS

The positive balance of **current transfers** according to the results of 2012 reached another high and constituted USD 2 061.5 million, having increased by 12.1 percent as compared to 2011 and by 70.8 percent as compared to the corresponding index of 2009, which registered the highest decline in net inflows of current transfers for the last 5 years. The ratio of the balance of current transfers account to GDP constituted 31.9 percent.

Private transfers (neutral presentation of the balance of payment) the net inflow thereof amounted to USD 1 998.3 million, which is 13.8 percent more than in the base period, play a determining role in the current transfers account.

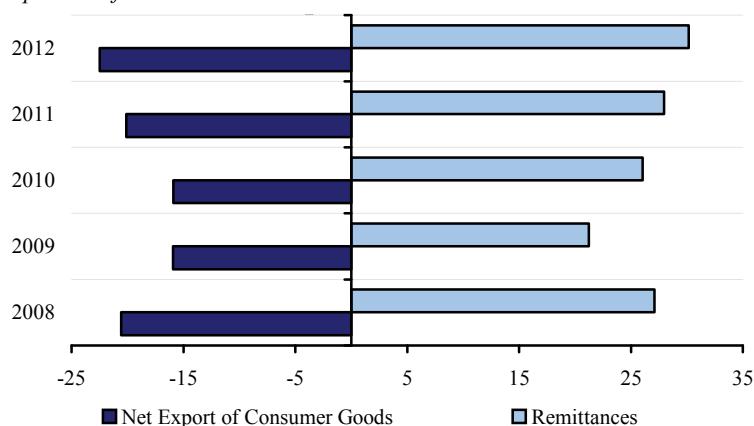

This increase was traditionally achieved by remittances of workers, which occupy 97.2 percent of the total private transfers received. Transfers under this article continue growing: net inflow of the workers' remittances amounted to USD 1 951.7 million (30.2 percent to GDP), having increased by 17.5 percent as compared to 2011.

The main channel for inflows of the workers' remittances to the republic is the range of transfer systems¹⁰ (91.4 percent of the total inflows). In the reporting period, net inflow through transfer systems increased by 17.5 percent, having exceeded the amount of USD 1 768.5 million¹¹. At that, the geographical structure of money transfers remains the same. According to the results of the reporting period, the major share of remittances was received from the Russian Federation (96.4 percent), Kazakhstan (1.7 percent) and the USA (1.2 percent). In the structure of remittances transferred from the Kyrgyz Republic, the dominant share is occupied by Russia (97.4 percent).

¹⁰ Anelik, Blizko, Contact, Migom, MoneyGram, Western Union, Unistream, Zolotaya Korona, Leader, Bystraya Pochta, Allyur and other money transfer systems and remittances via the PE "Kyrgyzpochtasy".

¹¹ Without additional estimates of the NBKR.

**Chart 5: Balance of remittances and Net Export of Consumer Goods
in percent of GDP**

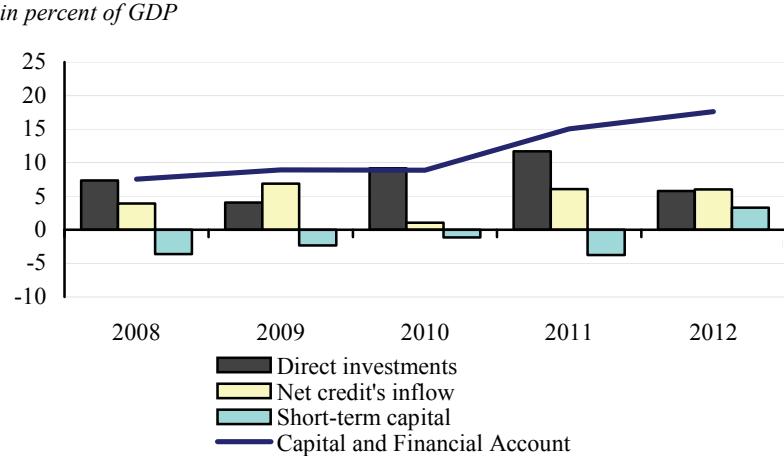

money grants by 24.0 percent.

CAPITAL ACCOUNT AND FINANCIAL ACCOUNT

According to the results of 2012, the **balance of the capital account and financial account** was formed with a positive balance in the amount of USD 1 138.4 million (17.6 percent to GDP), having increased by 27.4 percent as compared to the corresponding index of 2011. At that, increase in the capital inflow was observed both on the financial account, and on the capital account.

**Chart 6: Capital and Financial Account
in percent of GDP**

grants within the framework of the government investments program in the amount of USD 100.5 million, which is 1.0 percent less than in the previous year, however, 80.1 percent more than the index of 2008.

Moreover, there was decline of the net outflow of the migrants' assets to USD 17.7 million (decrease by 81.0 percent), thus reaching its minimum for the last years in the range of comparable data. Decline of this index was conditioned by decrease in the number of citizens, who have left to live permanently in foreign countries, recorded in the reporting period¹², the reason thereof is likely to become denunciation of the agreement between the Russian Federation and Kyrgyzstan on simplified procedure of becoming a citizen of the Russian Federation by the citizens of the Kyrgyz Republic entered into on March 2012.

Besides, agreement on debt relief in the amount of USD 49.2 million between the government of the Kyrgyz Republic and the Republic of Turkey, which came into force on October 4, 2012, had a positive influence on formation of the capital account balance.

Remittances are the major source of trade deficit financing. The balance of remittances still covers net export of consumer goods, which formed with a negative value in the amount of USD 1 454.5 million.

In the reporting period, net inflow of current transfers in the **government sector** (neutral presentation of the balance of payment) formed with a positive value in the amount of USD 63.2 million, having decreased by 24.1 percent as compared to the corresponding index of 2011. Decline was primarily conditioned by decrease in the received

¹² According to the data of the NSC KR KP, the number of migrants leaving for foreign countries constituted 13 019 people (39 403 people in 2011).

THE CURRENT STATUS OF THE BALANCE OF PAYMENT

The surplus of the **financial account** in 2012 constituted USD 972.4 million, having increased by 17.3 percent as compared to the previous year.

In the reporting period, net inflow of **direct investment** constituted USD 372.1 million; meanwhile, in the corresponding period of the previous year, the inflow thereof reached USD 693.6 million (decrease by 46.3 percent). Direct investment decreased due to decline in the net inflow of reinvested earnings, which fell by 84.0 percent and constituted USD 75.8 million. Net inflow of funds invested into stock capital decreased from USD 71.8 million to USD 17.7 million. At that, net inflow from other direct investments reflecting dynamics in debt liabilities of the enterprises to the direct investor increased from USD 146.4 million to USD 278.6 million, primarily, due to increase in loans provided by foreign co-owners by 2.0 times.

In the reporting period, in the section by types of economic activity the major inflow of direct investments was observed in the processing industry, operations with real estate, rent¹³ and financial sector. At that, net inflow of investments decreased in all aforementioned sectors: the major decline was observed in the enterprises of processing industry (by 63.0 percent). Investments into the companies carrying out operations with real estate and funds decreased by 17.2 and 4.3 percent, respectively. In the geographical structure, the major share of direct investment is received from Canada, Great Britain, China and Switzerland; they are followed by the CIS-countries - the Russian Federation and Kazakhstan. Decrease in net inflow of investment was observed from all aforementioned countries, excluding Great Britain (increase by 2.1 times) and the Russian Federation (increase by 4.9 times).

In the reporting period, the balance of **portfolio investments** formed with a positive value and constituted USD 5.7 million, while the corresponding index was negative in 2011 (USD -0.3 million). Generally, inflow of funds was conditioned by sale of bonds and other debt securities of non-residents.

Net volume of **other investments**, attracted to the republic in 2012 constituted USD 594.9 million, having increased by 4.4 times as compared to the corresponding index of the base period. Positive balance of other investments formed due to significant decrease in the external assets of residents of the Kyrgyz Republic along with increase in the liabilities thereof to the external world.

According to the results of 2012, the residents' assets decreased by USD 144.1 million, while in the previous year, the growth thereof constituted USD 232.1 million. At that, the most significant decrease was observed in the residents' assets placed onto the accounts of foreign banks (by USD 181.3 million). It should be noted, that 90.0 percent of the total cash balance on the accounts of the enterprises outside their national territory accounts for the enterprises of the industrial sector¹⁴.

Accounts receivable by the residents of the Kyrgyz Republic increased by USD 22.9 million. As of the end of 2012, 89.0 percent of gross accounts receivable¹⁵ is accounted for the enterprises of processing industry, the enterprises carrying out operations with real estate, rent and rendering services to the customers, as well as enterprises of the Kyrgyz Republic operating in the sphere of trade and repair works.

In the reporting period, liabilities on other investments to the external world increased by USD 450.8 million. Growth of liabilities was conditioned by attraction of loans and increase in accounts payable of the resident enterprises.

Net inflow of external loans amounts to USD 387.5 million, while the amount of USD 255.5 million was received by the public sector, and USD 131.9 million - by the private sector. At that, it should be noted, that the bulk of loans attracted by the public sector was provided within the public investments program from the non-CIS countries (USD 348.1 million). Payments on principal amount of debt under the loans provided earlier constituted

¹³ According to the NSC KR, this group includes exploration works

¹⁴ As of October 1, 2012

¹⁵ Excluding debt liabilities of direct foreign investors to the resident enterprises of the Kyrgyz Republic

THE CURRENT STATUS OF THE BALANCE OF PAYMENT

USD 92.6 million (increase by USD 49.8 million as compared to the previous year). The volume of payments on servicing loans received by the private sector earlier have also increased (by USD 18.4 million), reaching USD 206.6 million, while inflow of loan proceeds decreased by 39.0 million, reaching USD 338.5 million.

In the reporting period, the loan debts of resident enterprises increased by USD 54.7 million. Generally, the enterprises of processing industry had such liabilities, as well as the spheres of trade, transportation and communication, the share thereof constituted 81.4 percent of the total debt¹⁶.

The "**errors and omissions**" article was positive in the amount of USD 480.9 million for the first time since 2008, while in 2011 this index was negative and reached USD 303.8 million. Positive value of this article indicates incomplete statistical coverage of operations with capital inflows to the country. Currently, for the purposes of decrease in the index of aforementioned article, the National Bank carries out activities on statistical coverage improvement of the balance of payment index.

Gross international reserves at the end of 2012 constituted USD 2 066.6 million, which covers 3.8 months of the future import of goods and services.

¹⁶ Excluding debt of the resident enterprises to the direct foreign investors.

REAL EFFECTIVE EXCHANGE RATE

According to the results of 2012, index of the real effective exchange rate (REER) increased by 0.1 percent and constituted 112.6 percent.

Growth of the REER index was primarily conditioned by lower inflation rate in the partner countries compared to the corresponding index in the Kyrgyz Republic. Thus, in 2012, inflation rate in the Kyrgyz Republic constituted 7.6 percent, as the average inflation rate in the main trade partner-countries in the same period constituted 2.5 percent.

Index of the nominal effective exchange rate (NEER) of the Kyrgyz som decreased by 4.7 percent since the beginning of 2012 and constituted 110.8 percent at the end of the reporting year. Decrease was conditioned by devaluation¹⁷ of the Kyrgyz som at the end of the period under review, as compared to the average exchange rate at the end of 2011, against Turkish lira 6.0 percent, Russian ruble by 4.1 percent, Chinese yuan by 3.4 percent, US dollar by 1.6 percent, Euro by 0.9 percent. Besides, the exchange rate of the Kyrgyz som strengthened at the level of 0.1 percent against Kazakh tenge.

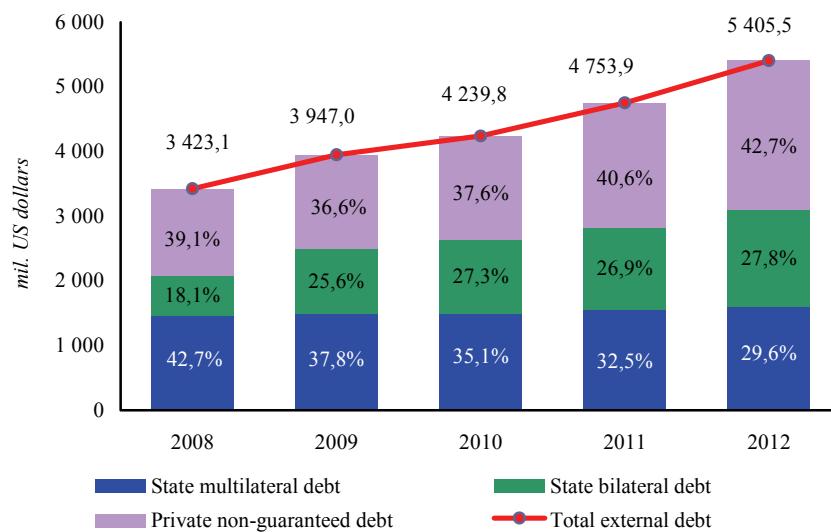

EXTERNAL DEBT OF THE KYRGYZ REPUBLIC

At the end of 2012, the total nominal external debt (received and repaid) reached the amount of USD 5 405.5 million, having increased by 13.7 percent compared to the corresponding period of the previous year. The

aforementioned debt is represented by the liabilities of the public and private sector:

Chart 7: Composition of total external debt of the Kyrgyz Republic as of the end of the period*

millions of U.S. dollars, as of end of period

* According to the National Bank

- public external debt reached USD 3 100.0 million, which constitutes 57.3 percent of the total debt (including debt under the loans provided by the IMF - USD 190.5 million). The structure of the national external debt is represented by obligations to the official creditors - multilateral and bilateral donors;

- the debt of the private sector¹⁸, nonguaranteed by the government, constituted USD 2 305.5 million (42.7 percent of the total debt).

The structure of the total external debt suffered definite changes in the last years. Thus, in the end of 2008, the major share was occupied by the national multilateral debt (42.7 percent), while, in the reporting period, the share of private nonguaranteed debt is dominant in the total external debt (42.7 percent).

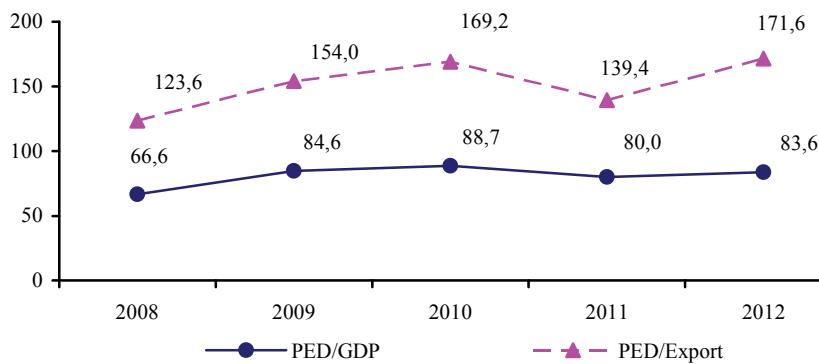

At the end of 2012, the Kyrgyz Republic is characterized by the major debt indices:

- total nominal external debt to GDP - 83.6 percent;
- total nominal external debt to the export of goods and services - 168.9 percent.

¹⁷ The data are submitted at the nominal bilateral exchange rate of the Kyrgyz som, the year of 2000 is used as a base period for index calculation.

¹⁸ According to the data of the NSC

* According to the National Bank

Chart 10: The structure of the state of bilateral debt of the Kyrgyz Republic on the creditors at the end of the period *

in millions of U.S. dollars and as a percentage of total external debt

* According to the National Bank

In the reporting period, deterioration of debt indices was primarily conditioned by more dynamic increase in the debt of the private sector not guaranteed by the government of the Kyrgyz Republic.

PUBLIC EXTERNAL DEBT

As of December 31, 2012, the public external debt of the Kyrgyz Republic constituted USD 3 100.0 million, having increased by 9.7 percent as compared to the corresponding index of the previous year.

As of January 1, 2013, the structure of the public external debt of the Kyrgyz Republic is represented by the indebtedness to the multilateral and bilateral creditors, which occupies 51.6 and 48.4 percent, respectively, of the total public external debt.

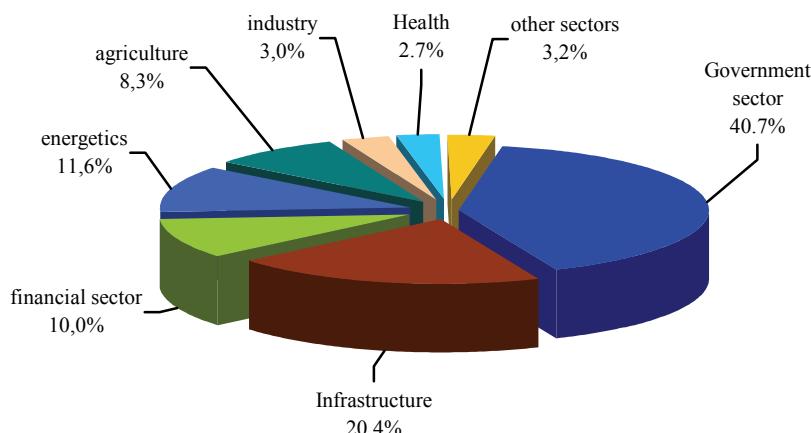

At the end of 2012, the nominal public external debt to multilateral creditors increased by USD 53.9 million and constituted USD 1 598.9 million. Multilateral creditors of the Kyrgyz Republic are international financial institutions, such as the World Bank, the Asian Development Bank and the International Monetary Fund, the Islamic Development Bank and the European Bank for Reconstruction and Development, etc. At that, in the last five years, the structure of the multilateral debt under loans remained almost the same: more than 90.0 percent of the total debt under multilateral loans is accounted for the liabilities to the World Bank, the Asian Development Bank and the International Monetary Funds.

In the reporting year, nominal external debt to the bilateral creditors increased by USD 220.3 million and reached USD 1 501.2 million. The major share of the aforementioned debt is accounted for the member countries of the Paris Club - USD 934.5 million. The debt to the countries beyond the Paris Club constituted USD 566.7 million.

The structure of the bilateral debt suffered changes in the last five years. In 2008, the major creditors of the Kyrgyz Republic were Russia and Japan, which occupied 71.6 percent of the total bilateral debt, however, at the end of 2012 China became the largest creditor (35.1 percent of the bilateral debt). 32.6 and 24.1 percent of the bilateral debt is accounted for the Russian Federation and Japan, respectively.

Chart 11: The structure of the external debt of the Kyrgyz Republic by industry on 1 January 2013 *

mil. US dollars

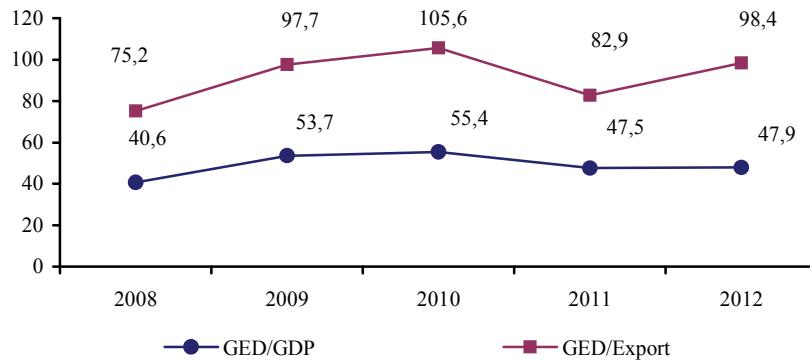

* According to the National Bank

share of loans provided under unfavorable conditions is not significant and constitutes 1.2 percent.

Chart 12: The coefficients of the external debt of the public sector *

in percent

* NBKR calculations

Gross inflow of loans constituted USD 348.1 million, thereof the largest tranche in the amount of USD 254.8 million (73.2 percent) was provided by the Export-Import Bank of China directed for development of energy sector and infrastructure.

In 2012, service rendering on the public external debt constituted USD 92.6 million.

¹⁹ Favorable terms of loans for the Kyrgyz Republic depend on the credit period, applied interest rate and are calculated on the basis of the grant-element, which should constitute at least 35.0 percent.

Loans provided by the multilateral and bilateral donors are generally directed for financing structural transformations in the economy, development of infrastructure, financial system, energy sector and agriculture. Structure of the public debt is presented by sectors in Chart 11 as of the end of the period under review.

Structure of the public external debt according to the financial conditions is primarily presented by soft loans (low interest rates and long repayment period)¹⁹, the volume thereof constituted 98.8 percent of the total volume. The

At the end of the period under review, indices of the public external debt were as follows:

- ◆ nominal PED to GDP - 47.9 percent;
- ◆ nominal PED to the export of goods and services - 90.8 percent.

In the reporting period, net inflow of borrowed funds to the public sector reached USD 255.5 percent, having increased by 49.3 percent as compared to the previous year.

PRIVATE EXTERNAL DEBT

On December 31, 2012, the private external debt nonguaranteed by the government constituted USD 2 305.5 million, having increased by 19.6 percent as compared to the corresponding index at the end of 2011.

At the end of 2012, the indices of the private external debt were as follows:

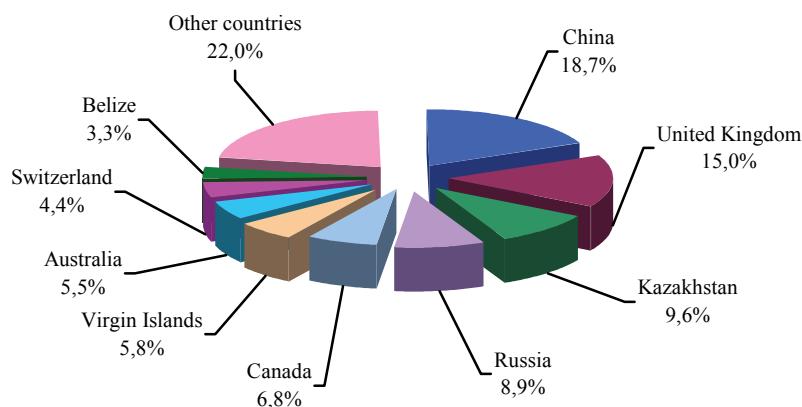

- ◆ nominal Private ED to GDP - 35.6 percent;
- ◆ nominal Private ED to the export of goods and services - 73.2 percent.

Structure of the private external debt is presented by loans provided by direct and other foreign investors, the volume thereof constituted USD 993.9 million and USD 1 311.6 million, respectively.

At the end of the reporting period, the private sector of economy had debts to 58 countries of the world; the largest are China (USD 431.0 million), Great Britain (USD 346.7 million), Kazakhstan (USD 221.7 million), Russia (USD 206.0 million) and Canada (USD 155.9 million).

Chart 13: The distribution of private external debt of the countries on January 1, 2013*

Percentage of total private foreign debt

In 2012, net external inflows of borrowed funds to the private sector constituted USD 401.5 million, having increased by 25.9 percent as compared to the corresponding index of the previous year. Gross inflow of external loans to the private sector amounted to USD 704.1 million, the volume of payments directed for servicing principal debt constituted USD 302.6 million.

INTERNATIONAL INVESTMENT POSITION OF THE KYRGYZ REPUBLIC

According to the results of 2012, net international investment position on the Kyrgyz Republic formed negative and constituted USD 4 044.3 million, which is conditioned by excess of the country's liabilities to the external world over available foreign assets.

At the end of 2012, foreign assets of the country amounted to USD 3 736.2 million, having increased by 7.5 percent as compared to the corresponding period of 2011. Such decline was primarily conditioned by dynamics of prices and exchange rates. Decrease of direct investments by 46.9 percent to USD 725.9 million was observed in the structure of assets. This trend was generally conditioned by decline in prices for the shares of Centerra Gold Inc., in which the Kyrgyz Republic is one of the largest shareholders. Aforementioned decline was to some extent compensated by increase in assets on "other investments" and reserve assets of the NBKR.

Chart 14: Dinamics of IIP

in mil USD, at the end of year

In 2012, reserves on "other investments" increased by USD 110.1 million, at that, due to currency changes increase constituted USD 252.8 million, while transactions decreased reserves by USD 145.9 million. In the structure of "other investments", growth was observed in cash and deposit assets by USD 87.4 million, as well as in trade credits - by USD 15.4 million.

In 2012, reserve assets increased by USD 232.1 million; growth was primarily

conditioned by transactions (by USD 200.5 million). Growth was observed in the assets represented by foreign securities and monetary gold. Moreover, decline was observed in the reserve assets represented by cash and deposits by 7.9 percent to USD 992.6 million conditioned by the results of carried out transactions.

Foreign liabilities at the end of 2012 constituted USD 7 780.5 million, having increased by 11.5 percent as compared to the corresponding period of 2011. Generally, growth was conditioned by changes resulted from transactions (growth by USD 833.4 million). In the structure of liabilities, the most significant increase was observed in direct foreign investments and "other investments".

Residues on the article "direct investments" increased by 14.3 percent and, at the end of 2012, constituted USD 2 757.8 million. Such growth was primarily conditioned by changes due to transactions (growth by USD 372.2 million).

At the end of 2012, reserves on "other investments" of non-residents constituted USD 5 016.3 million, having increased by 10.1 percent as compared to the corresponding level at the end of 2011. In the structure of "other investments" the most significant changes are accounted for the loans provided to the public and private sector, as well as trade credits.

Thus, at the end of 2012, the financial obligations of the public sector under the loans increased to USD 3 002.1 million, primarily due to newly attracted loans. Moreover, liabilities under the loans provided to the private sector²⁰ increased to the amount of USD 1 218.2 million due to transactions. Trade credits increased at the end of 2012 to the amount of USD 394.3 million, primarily due to changes resulted from transactions (increase by USD 54.7 million).

²⁰ Excluding liabilities under the loans to direct foreign investors.

Comment:

* including the allocation of SDR between the IMF countries-members to support their balance of payments had the impact on the value of foreign liabilities. As a result, the liabilities of the Kyrgyz Republic increased by US\$ 132.2 billion.

Long-term investments are investments in financial assets, whose initial maturity was set up, in compliance with a contract, as more than one year or has never been stipulated

Short-term investment are investments in financial assets, with maturity of one year or less than one year, pursuant to contract, or paid as short notice

* including the allocation of SDR between the IMF countries-members to support their balance of payments had the impact on the value of foreign liabilities. As a result, the liabilities of the Kyrgyz Republic increased by US\$ 132.2 billion.

ANNEX II: THE KYRGYZ REPUBLIC BALANCE OF PAYMENTS COMPILATION TECHNIQUE

1. Introduction

The balance of payments of the Kyrgyz Republic reflects the aggregate data on external economic transactions with other countries of the world for a certain period of time. These transactions, mainly conducted between residents and nonresidents of the country, cover transactions with goods, services, incomes, and transactions with financial assets and liabilities.

The balance of payments is compiled in accordance with the fifth edition of the *Balance of Payments Manual*, worked out by the IMF.

The balance of payments of the Kyrgyz Republic is compiled by the National Bank of the Kyrgyz Republic and is based on data received from the National Statistics Committee of the Kyrgyz Republic, internal sources of the National Bank, commercial banks, the Ministry of Finance of the Kyrgyz Republic, the State Customs Service under the Government of the Kyrgyz Republic, the Ministry of Foreign Affairs, and other organizations and enterprises.

The laws On the National Bank and On Banks and Banking Activities in the Kyrgyz Republic as well as normative act of the Government and the National Bank of the Kyrgyz Republic provide for the legislative basis for collection of data and maintenance of their confidentiality.

The balance of payments is compiled on a quarterly basis in millions of US dollars in one quarter upon completion of a period under review. In addition to this periodical, the balance of payments data are published in the following publications of the NBKR: "Bulletin of the national bank", issued on the monthly basis, the quarterly publication "Review of inflation in the Kyrgyz republic" and the "Annual Report of the national Bank of the Kyrgyz Republic". The balance of payments data are also published in the monthly periodical of the National Statistics committee "Social and Economic Status of the Kyrgyz republic". The Balance of Payments data are also submitted to the IMF for publications in the *Balance of Payments Statistics Yearbook* and in the *International Financial Statistics*.

2. Major Balance of Payments Compilation Rules

According to the definition of residence in the balance of payments, individuals residing or intending to reside in an economic territory of a country for a year or more are considered to be a resident, as well as legal entities engaged in production of goods and/or services in the country in significant volumes, or holding big land plots, possessing facilities and industrial units located in the territory of the republic.

In compliance with the balance of payments compilation rules each transaction is recorded in two entries, credit and debit entries. Financial transactions are reflected on the accrual basis, that is, the amounts to have been calculated, though might not have been paid in fact.

Table II.1. Major Balance of Payments Compilation Rules

Transactions	Credit, plus (+)	Debit, minus (-)
Goods and services	<i>Export of goods and services</i>	<i>Import of goods and services</i>
Income	<i>Receipt of income</i>	<i>Payments of income</i>
Transfers	<i>Receipts of transfers</i>	<i>Commitment</i>
Transactions with financial instruments	<i>Decrease in foreign assets</i> <i>Increase in foreign assets</i>	<i>Increase in foreign assets</i> <i>Decrease in foreign liabilities</i>

One should note that in accordance with the above principle of a double entry, the sum of all credit entries should be equal to the sum of all debit entries that is why an overall balance should be equal to zero. Though, in practice the balance of account is never equal to zero. The reason is that data used to compile the balance of payments come from various sources. For instance, information on exports of goods is formed on the basis of customs statistics, whereas those on foreign exchange earnings for exported goods comes from bank reporting. Thus, a non-zero balance as a result of the use of data from various independent sources is balanced by an additional item that is called *net errors and omissions* which is equal in its value to the above balance, but with an opposite sign.

3. Structure and Information Base for the Balance of Payments Compilation

Comprehensive information is used to compile the balance of payments, several sources of information being used at the same time to compile one item. Table II. 1 gives a description of what data and from which sources are applied to compile the balance of payments of the Kyrgyz Republic.

The balance of payments transactions are accumulated in two major groups of accounts: a current account and a capital and financial account. The current account reflects transactions involving commodities, services, income, and current transfers. The capital and financial account consists of the capital account and the financial account, and shows how are the goods and services financed which are presented in the current account.

Trade Balance. The difference between the total volume of exports and imports of goods at F.O.B. value is the trade balance. Data on export of F.O.B. valued goods and on import of C.I.F. valued goods, based on customs information and information from enterprises, are provided by the National Statistics Committee. F.O.B. valued imports are estimated by the National Bank through an assessment of the share of transport and insurance costs of C.I.F. valued imports on the basis of findings of enterprise surveys carried out by the National Statistics Committee. Data on exports of goods are supplemented by the National Statistics Committee with data on goods procured by foreign airline companies in airports of the Kyrgyz Republic, while the data on imports of goods are supplemented with data on goods procured by national airline or railway companies in ports of foreign states. Imports by «shuttle traders» for 1993-95 are estimated through multiplication of the number of passengers of charter flights by an estimate of an average quantity of goods imported by one «shuttle trader». However, since 1996 the data from the State Customs Inspectorate on imports by «shuttle traders» have been incorporated in the balance of payments, while since 1997 this information has been supplemented with the data of the National Statistics Committee on unregistered trade by «shuttle traders», that are formed as estimates based on surveys conducted at customs posts. Starting from 2006 the National Statistics Committee started to add export of agricultural products (meat, potatoes, onions, milk) to the total export of goods. Additional estimates are made once a year in June at the end of the reporting period with the application of the following methods: volume of production minus consumption minus export minus losses.

Services. Export of **transportation services** is calculated on the basis of data collected by the National Statistics Committee, separately by all types of transportation to cover railroad, air, road transportation services, from respective transportation organizations and departments, and data collected from the banking statistics. Import of transport and insurance services connected with freight service is estimated as the share in import at C.I.F. prices as it mentioned in the section «Trade balance». This also covers data on export/import of services (transportation of gas), provided by the public enterprise «Kyrgyzgas», as well as data from large enterprises, departments, and data from the statistics agency and as well as information on profit and expenditures of airline companies in the Kyrgyz Republic. Till 1999 the item «**Travels**» on imports showed expenses of tourist companies abroad, and on exports it showed income of rest houses, holiday camps received from non-residents (taking into consideration the data received from commercial bank reports). Since 1999 the item «Travels» is estimated in compliance with the methods based on the number of residents arriving (leaving) the republic. Data on **Construction Services** are also collected by the National Statistics Committee from enterprises attracting

nonresident construction companies and from construction companies providing their services abroad and also by big joint ventures. Data derived from banking statistics of commercial banks that provide or receive financial services and the data on receiving the financial services by the National Bank are reflected in the **financial services item**. The banking statistics at present is considered to be the most complete and in-depth source of information on computer and information services. **Government Services** include data on expenses on maintenance of embassies and representative offices of the Kyrgyz Republic, collected by the National Bank from its internal sources and the Ministry of Foreign Affairs; information on expenses on maintenance of foreign embassies and representative offices in the Kyrgyz Republic, collected by the National Bank on the basis of the banking statistics. The National Statistics Committee and the National Bank collect the data on **business services** from enterprises that receive or render such services. Data on import of services in the **Technical assistance** item are found in the IMF estimates and on data of organizations on implementation of investment projects. **Other services** include services that were not covered by the above mentioned items and the source of this item is the National Statistics Committee data collected from enterprises and the banking statistics.

Income. This item includes payments and receipts for utilization or provision of production factors, namely, labor and capital, and is divided into two accounts: labor remuneration and investment income. Employees compensation includes wages and salaries received by non-residents from residents of the Kyrgyz Republic, or vice versa. Direct, portfolio, and other investment income include receipts and payments on external financial assets and liabilities of residents. The data on income from portfolio investment are collected from the National Statistics Committee based on the reports of enterprises, as well as from banking statistics. Data on other investment income are collected from internal sources of the National Bank (interests on IMF loans and loans served by the National Bank), from the Ministry of Finance (interests on state credits) and from enterprises (interests on non-public credits). Data on compensation of employees are collected by the National Statistics Committee and by the National Bank from enterprises that hire foreign employees.

Transfers. Transfers are identified as current transfers reflected in the current account, and capital transfers reflected in the capital account. **Capital transfers** include the following: the transfer of ownership of a fixed asset; the creditor's repudiation, the transfer of cash related to the acquisition or selling of a fixed asset; transfers related to migration of the population reflected as offsets to flows of property and financial assets that accompany movements of migrants when they change their residence. All other types of transfers are referred to **current transfers**. The typical example of current transfers for our country is humanitarian assistance recorded once in the balance of payments as a debit entry from import of commodities, then - as a credit offset entry for transfers. Current official transfers are commodity grants and technical assistance, as well as contributions to the funds of international organizations. Data on humanitarian assistance together with imports data are obtained from the National Statistics Committee. Assessments of technical assistance are based on data from the IMF. Data on contributions to the funds of international organizations are collected by the National Bank from the Ministry of Finance. Private current transfers are represented, mainly, by cash transfers of the population to and from abroad, the data on which are collected by the National Bank from the Ministry of Transport and Communication and banking statistics. To assess capital official transfers, the National Bank singles out capital goods from the total volume of commodity grants, the data on which is obtained from the National Statistics Committee. The transfers from migrants are estimated by the National Bank based on the data on the migrants received from the National Statistics Committee and through the assessment of the average value of assets exported by the migrants.

Since 2000 the NBKR has been revising the item "remittances of workers abroad". The amount of the revision is defined as the product of the officially registered remittances and the revision factor. The world community conducts many inspections of remittances of those, who work abroad, with each inspection containing the estimation of the inflow of capital in cash. In its estimations, the NBKR could be guided by these the findings of these inspections and annually change the factor.

Financial Account. The Financial Account includes transactions resulting in an increase or decrease in foreign assets and liabilities of residents. So far as a resident may procure a foreign financial asset not only from a non-resident, but from a resident as well, the financial account may reflect transactions with foreign assets between residents. Transactions by each type of assets are registered on a net basis in the financial account. Thus, its entries reflect a net aggregate change for a certain period in all positive and negative transactions with assets or liabilities of a given type. The net decrease in total assets and the net increase in total liabilities are registered as a credit entry, while the net increase in assets and the net decrease in liabilities - as a debit entry. Components of the financial account are classified by their functional features and are divided into direct investments, portfolio investments, other investments, and reserve assets.

Direct Investments are investments by individuals and legal entities of one country (a direct investor) in order to participate in management of an economic enterprise of another country (an enterprise with direct investments). Not only capital investments of the direct investor as a participation in ownership capital of the enterprise, but also all other forms of investments between the direct investor and the direct investment enterprise are classified as direct investments. Credits provided by the direct investor to the direct investment enterprise also considered as direct investments could serve as an example. Direct investments are subdivided into investments abroad, or in the domestic economy. Data on direct investments are received by the National Bank from the National Statistics Committee that collects this information from joint ventures and foreign enterprises, as well as directly from some large-scale joint enterprises. In this connection, reports of commercial banks are used for this purpose as well. Data on direct investments to the banking sector are furnished to the National Bank through reports of commercial banks.

Portfolio Investment reflects transactions with securities and debt securities, which are traded only for the purpose of earning income. A conventional criterion to distinguish the direct investments and portfolio investments is stock ownership by an investor of 10 or more per cent of ordinary shares of an enterprise. Portfolio investments are classified, in their turn, as transactions with assets and liabilities, as well as by the type of the financial instrument (securities, ensuring participation in capital, and debt securities). Data on portfolio investments are obtained by the National Bank from its internal sources, from commercial banks, the National Commission for Securities Market, and large joint ventures.

Financial Derivatives are financial instruments, whose functioning conditions «are tied» to some other financial instruments or characteristics (such as foreign exchange, government bonds, price indices for shares, interest rates, etc.) or to any stock exchange goods (gold, sugar, coffee, etc.), which might be purchased or sold later. The financial derivatives provide to owners formerly agreed rights to receive definite assets on fixed term in future, e.g. in the form of cash, primary financial instrument, etc. Options (currency, interest, commodity, etc), circulating financial futures, warrants, and such instruments, as agreements on currency or interest swaps are the derivative financial instruments. Transactions with derivative instruments are segregated into a separate group of operations (mainly financial), their accounting is done separately from registration of operations with those securities or goods, which underlie the derivative contracts and to whose characteristic features they «are tied». In the balance of payments of the Kyrgyz Republic, the financial derivatives are produced by hedging the gold price and the data on them are submitted by the enterprises.

Other Investments are classified as transactions with assets and liabilities and include credits, creditor and debtor indebtedness, deposits and foreign exchange in cash, and other assets and liabilities not included in the previous categories. Data on foreign assets/liabilities of commercial banks are collected by the National Bank from reports of commercial banks. Data on foreign loans received or guaranteed by the Government, as well as information on servicing them, are collected by the National Bank from the Ministry of Finance. Information on loans serviced by the National Bank is received from its internal sources. Data on non-public loans are collected from the National Statistics Committee. Data on creditor and receivables of resident enterprises (trade credits) are received by the National Bank from the National Statistics Committee, which collects these data from

enterprises. Data on accounts of enterprises abroad is collected by the National Bank from enterprises. Data on other assets, representing, mainly, contributions of Kyrgyzstan to the funds of international financial organizations are received by the National Bank from the Ministry of Finance and its internal sources. So far as the balance of payments statement is compiled on an accrual basis, principal and interest for repayment on credits reflect accrued amounts for a certain period, though these amounts could be overdue, that is not paid in time. The difference between accrued and actually paid amounts is reflected in the item «Other Investments» as changes in outstanding. In case of rescheduling of outstanding as a new loan, the balance of payments statement reflects a reduction in outstanding and the restructuring of debt as a new loan.

Reserve Assets comprise foreign assets of the National Bank of the Kyrgyz Republic that may be used to finance the balance of payments deficit. The balance of payments reflects changes in reserve assets related to transactions with monetary gold (transactions only between the National Bank and foreign monetary authorities), SDR, assets in freely convertible currencies, liquid foreign securities, and with other foreign liquid assets. Data on reserve assets and IMF loans, as well as on other assets and liabilities of the National Bank reflected in the balance of payments are based on information obtained from internal sources of the National Bank.

4. The Balance of Payments Presentation Formats

The balance of payments of the Kyrgyz Republic is compiled according to standard and analytic formats of presentation. **Standard Format** of presentation (Annex I. Table 1.1) is characterized by reflection of all of the items of the balance of payments either in two columns, separate for credit and debit entries, and the total amount of credit entries as equal to that of the debit entries including errors and omissions, or in the balanced format. The standard format of presentation shows that the total balance of payments is always equal to zero. Under the **Analytic Presentation** (Table 1) all items are balanced. The total balance of payments is formed as the sum of certain items which are calculated proceeding from characteristic features of a particular country. These items should reflect transactions which are conducted autonomously (that is, they meet their own purposes), thus influence on the size of the total balance of payments. These items are called above the line items. All other transactions recorded in the «below the line» item are conducted to finance this balance of payments. These transactions are forced, dependable, and are related to regulatory actions of the National Bank and the Government. Thus, the balance of payments involves a certain degree of subjective judgment, though, nevertheless, it enables to measure the value of the balance of payments, and to identify financing needs.

ANNEX III: METHOD OF ASSESSMENT OF THE "TRAVEL" ITEM IN THE BALANCE OF PAYMENTS

The method of assessment of the «Travel» item was developed with the purpose of an authentic and complete reflection of residents' expenses abroad and those of nonresidents in the republic instead of applying the traditional method of data collection from hotels, recreation centers, and tourist companies. This method of data collection for the «Travel» item covered only part of transactions, and in compliance with the international experience of the balance of payments compilation it is preferable to evaluate this item through estimations.

Export/import of services under the «Travel» item is a product of expenses per one arriving / leaving resident per number of residents who arrived in/left the country.

Expenses are calculated as estimates of categories of trips specifying them by purposes:

- Official
- Tourist
- Personal
- Commercial

Expenses are calculated as estimates, separately for each category by purposes of trips.

The estimation of expenses of Kyrgyz citizens, who are on short-term business trips abroad, is calculated on the basis of the minimal rate of the daily allowance including the cost of 3 meals and accommodation expenses abroad. These rates are established by public administration agencies of the republic. Data of tourist companies on the value of vouchers or shop tours, which do not include a fare (air or railway tickets), are used in order to assess trips for recreational or commercial purposes (shop tours). These expenses of tourists are supplemented with the data on their personal expenses, which are not included in the expenses for purchases of goods to be subsequently resold in the republic.

Expenses of foreign citizens staying in Kyrgyzstan are also calculated as estimates and include average expenses for daily meals, average daily hotel expenses in the republic, and additional expenses during their stay in the republic.

This method of assessment of the «Travel» item is carried out on the basis of the official NSC and Customs authorities data as well as on the basis of information from travel companies and hotels.

ANNEX IV: NOMINAL AND REAL EFFECTIVE EXCHANGE RATE CALCULATION TECHNIQUE

The exchange rate, which is a weighted average of nominal exchange rates of a national currency excluding tendencies for change in prices of a country under consideration with respect to prices in countries-partners in trading, is called a **nominal effective exchange rate** (NEER). The NEER does not reflect the price changes in the observed country relatively to price changes in the trading partners.

The nominal effective exchange rate allows to define the extent by which the exchange rate of the national currency changed relatively to exchange rates of the trading countries compared to a base year. However, the change in the nominal effective exchange rate does not reflect changes in the purchasing power of the currency, nor to what extent the competitiveness of goods produced in this country and showing an export potential changed during a specific period of time. In order to define the extent by which the purchasing power of the currency changed during some period of time, a real effective exchange rate (REER) is calculated.

The nominal effective exchange rate adjusted to the change in price levels corresponding to a relative change in prices in countries - partners in trading is called the **real effective exchange rate**.

The real effective exchange rate is calculated as a weighted average of real exchange rates of the national currency to the currencies of its main trading partners. For example, if the exchange rate of one country appreciates relative to the currency of the neighboring country with the higher inflation rate and depreciates at the same time relative to the currency of another country-partner with the lower inflation rate, the real effective exchange rate will reflect the exchange rate of the national currency of the country as a weighted average of these changes.

The most widely-spread formula for the nominal and real effective exchange rate calculations is a formula for deriving a weighted average of the two exchange rate changes for a certain time period relative to the base period.

Weights of countries in total foreign trade of the country under consideration are defined in order to calculate effective exchange rate indices. The weights reflect a relative importance of this or that currency for the other particular country. The effective exchange rate indices are calculated on the basis of the weights of bilateral trade (weights of export and import could be also used or their total average index). When calculating the real effective exchange rate of the som, the total weighted average on export and import is used.

The formula for calculating the weights is the following:

$$W_i = \frac{M_i + X_i}{\sum_{i=1}^n X_i + \sum_{i=1}^n M_i} \quad (1)$$

Where

W_i – weight of country i in the overall trade volume of the country, $\sum_{i=1}^n W_i = 1$,

M_i – import of the Kyrgyz Republic from country i,

X_i – export of the Kyrgyz Republic to the country i

$\sum_{i=1}^n X_i$ – is total export of the Kyrgyz Republic to its main trading partners,

$\sum_{i=1}^n M_i$ – total import of the Kyrgyz Republic from its main trading partners,

n – the number of countries included in this selection.

The countries with the largest shares in total foreign trade of the Kyrgyz Republic are considered as its trading partners, with the selection of countries to cover 90 percent of the total volume of external trade. Several import and export goods, which are not traded according to the principles of comparative advantages (these are gold, natural gas, electricity, commodity grants, that is, the state trades these products at the contractual fixed price) are removed from the latter. The basket of countries is reviewed by the NBKR each five years.

In 2005, the year of 2000 was taken as the base period, The NBKR changes the base period each five years.

The index of the bilateral nominal exchange rate is calculated in the following way (for example, to the US dollar):

$$NBER_{US_t} = 100 \times \left(\frac{ER_{US_t}}{ER_{US_0}} \right) \quad (2)$$

Where ER_{US_t} – the weight average geometric nominal exchange rates of the som vis-a-vis the US dollar for the t-period. The weighted average exchange rate of the som in the t-estimated period is determined as the weighted average geometric nominal exchange rates of the som effective during the calendar days of the t-period,

ER_{US_0} – relevant weighted average geometric nominal exchange rates for the base period 0.

The formula for calculation of the bilateral real exchange is as follows (for instance, for the US dollar):

$$RBER_{US_t} = 100 \times \left(\frac{ER_{US_t}}{ER_{US_0}} \right) \times \left(\frac{CPI_{KYR_t}}{CPI_{US_t}} \right) \quad (3)$$

Where ER_{US_t} – weighted average nominal exchange rates of the som (units of the US dollar for som 1) for the t-period,

ER_{US_0} – relevant weighted average geometric nominal exchange rate for the base period 0,

CPI_{KYR_t} and CPI_{US_t} – changes in the CPI index in the US and Kyrgyzstan, correspondingly, for a period t relative to base period 0.

The nominal effective exchange rate is a geometric weighted average of nominal bilateral exchange rates of major trading partner countries covered by the basket of countries under the consideration. For the t-period is calculated the following way:

$$NEER_t = (NBER_{1_t})^{W_{1_t}} \times (NBER_{2_t})^{W_{2_t}} \dots (NBER_{n_t})^{W_{n_t}} \quad (4)$$

Where $NBER_{i_t}$ – nominal bilateral exchange rate index of country i for month t, calculated on the basis of the formula (2)

W_{i_t} – the relevant weight.

The geometric weighted average of bilateral real exchange rates of major trading partner countries covered by the basket of countries under the consideration is the real effective exchange rate of the som. For the t-period it is calculated the following way:

$$REER_t = (RBER_{1_t})^{W_{1_t}} \times (RBER_{2_t})^{W_{2_t}} \dots (RBER_{n_t})^{W_{n_t}} \quad (5)$$

Where $RBER_{i_t}$ – the bilateral real index of the country i for the t-period calculated according to the formula (3),

W_{i_t} – the weight of the country, calculated on the basis of the formula (1)

Developments of the nominal and real effective exchange rates depend on the following factors. The first factor

is the nominal exchange rate. The depreciation (appreciation) of the som relative to other currencies entails an increase (decrease) in indices of both nominal and real effective exchange rates. The second factor is the price level in the country under consideration and in countries - partners in trade. The outreaching rate of inflation in the Kyrgyz Republic compared to the inflation rate in countries-trading partners leads to the depreciation of the real effective exchange rate and vice versa. The consumer price index is used only when calculating the real effective exchange rate. The third factor shows the weights of the major countries-trading partners in the total foreign trade turnover of the Kyrgyz Republic. The greater the weight of the country in the total foreign trade turnover of Kyrgyzstan, the greater the impact of the exchange rate of the som to the currency of that country is, as well as the impact of price developments on indices of effective exchange rates of the som.

Thus, the reduction of the index of real effective exchange rate indicates, as a rule, the increase in the price competitiveness of domestic products in the markets of this countries and vice versa.

The impact of the real effective exchange rate on the price competitiveness of Kyrgyz good is aggregated in Table IV.1

$$\varepsilon = \frac{E \times P}{P^*} \quad (6)$$

ε – real effective exchange rate of som

E – nominal exchange rate of the som (units of foreign currency for Som 1)

P – the price level in Kyrgyzstan

P^* – the price level in foreign country

Table IV.1. Basic facts of the REER behavior

Index	Change of Variable	REER Behavior	Changes in the competitiveness of Kyrgyz goods	Note (all other conditions being equal)
E, exchange rate	↑ Nominal appreciation	↑ Real appreciation	↓ Worsening of the competitiveness	Foreign goods become cheaper, while Kyrgyz goods – relatively more expensive
E, exchange rate	↓ Nominal depreciation	↓ Real depreciation	↑ Improvement of the competitiveness	Foreign goods becomes more expensive, while Kyrgyz goods – relatively cheaper
P, the price level in KR (in soms)	↑	↑ Real appreciation	↓ Worsening of the competitiveness	Foreign goods become cheaper, while Kyrgyz goods – relatively more expensive
P, the price level in KR (in soms)	↓	↓ Real depreciation	↑ Improvement of the competitiveness	Foreign goods becomes more expensive, while Kyrgyz goods – relatively cheaper
P^* , the price level in the foreign country (in its own currency)	↑	↓ Real depreciation	↑ Improvement of the competitiveness	Foreign goods becomes more expensive, while Kyrgyz goods – relatively cheaper
P^* , the price level in the foreign country (in its own currency)	↓	↑ Real appreciation	↓ Worsening of the competitiveness	Foreign goods become cheaper, while Kyrgyz goods – relatively more expensive

ANNEX V: INTERNATIONAL TRANSACTION REPORTING SYSTEM (ITRS)

In February 1997 a new system of International Transaction Reporting System (ITRS) was introduced at National Bank of the Kyrgyz Republic. In 2004 the NBKR amended and added the "Instruction on the Payment Record System". This system serves to reflect the balance of payments transactions conducted through the banking system and to provide for collection of detailed and timely statistical information on external economic operations. The system covers operations of commercial banks conducted through their correspondent accounts with foreign banks, operations with cash foreign currency and operations of nonresidents, having accounts in Kyrgyz currency. Full coverage of international transactions conducted through correspondent accounts of commercial banks with their foreign partners is a distinctive feature of the ITRS in Kyrgyzstan. It is ensured by no minimal threshold, below which transactions would not be accounted. Information is an important source of for the balance of payments compilation and formulation of the international investment position of the Kyrgyz Republic. The reporting data are classified and reflected according to the list of operations determined on the basis of the balance of payments standard components. The software «Automated system of operational accounting» (ASOA), developed by the National Bank, ensures efficiency in operations of the system, which functions at commercial banks and allows to automatically verify summary accounting statistics and to reveal inaccurate records.

Monthly reports are submitted by commercial banks to the National Bank of the Kyrgyz Republic in electronic and paper forms by the 15 the day of a month following the reporting month. Information on each account in the report starts from indicating a balance on the account at the beginning of the period, then movements of resources on the account during the reporting period. Information on each account in the report is completed with an indication of the balance on the account at the end of the reporting period. The balance at the beginning and at the end of the reporting period is indicated depending on the nature of the account. For nostro accounts and cash foreign currency, the balance at the beginning and at the end of the period is reflected as a credit entry, while for loro accounts and som accounts of nonresidents, on the contrary, - as a debit entry. After processing, all of the reports are grouped into a general database and are classified by standard balance of payments components. Then, data are selected from this database and are selectively reflected in the balance of payments of the Kyrgyz Republic.

In the electronic form, which is filled by commercial banks according to this system, each operation is classified with a breakdown by correspondent banks, currency of operation, date of operation, type of operation, country of a partner (contractor) of the bank's client, specific sector of the economy, country of the client, on whose account the operation is conducted. The type of the operation, name of the country, currency and sector of the economy are presented in the coded form. The PB-1 electronic form of the report is given in 13 fields, whose description is given below.

#	<i>Box</i>	<i>Contents of the box</i>
1	Partner	The correspondent bank abroad is indicated in this box. The "currency in cash" is indicated in this box in case of accounting transactions in cash. "Som accounts of nonresident customers" are indicated herein in accounting transactions of nonresidents in the Kyrgyz Republic.
2	Code of the country the partner's residence	The code of the country of location of the correspondent bank is indicated in this box. The NSC codifier country codes are used herein. When accounting cash transactions or transactions of

ANNEX V: INTERNATIONAL TRANSACTION REPORTING SYSTEM (ITRS)

		nonresidents in the Kyrgyz Republic, the code of the Kyrgyz Republic would be given herein as well.
3	Account	The code is indicated herein according to its classification ("1 - nostro", "2-loro", "3-foreign currency in cash", "4-accounts of nonresident clients").
4	Currency	The code of the currency used in the transaction is indicated herein. Letter codes of currencies listed in this interstate currency classifier MK (ISO 4217003-97) approved by the NBKR Board resolution No. 26/9 of July2, 2000 are used at the same time.
5	Date of transaction	The date of the accounting entry of the transaction is indicated in this field.
6	Code of transaction	The code of transaction in accordance with the list of standard balance of payments items is indicated in this field.
7	Code of the country of the payer-receiver	When accounting the non-cash transactions: on the outgoing payments the code of the beneficiary's (receiver) country is indicated in this field, while on the incoming payments - the code of the remitter's country. The transactions with the cash foreign currency are accounted similarly. For instance, when depositing cash for the transfer through other systems (Western Union, Contact, Money Gram, Anelik, etc.), the code of the receiver's country is indicated in this field, while when receiving cash via other systems (Western Union, Contact, Money Gram, Anelik, etc.) - the code of the remitter's country .The codes of the countries specified in the NSC's country codifier are used in this case.
8	Code of sector	The code of the economic sector the client of the bank in the Kyrgyz republic, whose account is used to conduct the transaction in the bank, is indicated in this field.
9	Code of the client's country	The code of the country, whose resident is the client of the bank in the Kyrgyz republic, whose account is used to conduct the transaction in the bank, is indicated in this field. The codes of the countries listed in the NSC codifier are used in this case.
10 11	Credit Debit	The flow of funds on the accounts is posted as debit and credit entries. The data are entered the following way: for the transaction on the nostro accounts and the transactions in foreign currency in cash - as credit receipt of funds, and their write-off, for the transaction for the loro accounts and the transaction on the som accounts of nonresident clients and vice versa: as credit entries for the write-offs from the account, as the debit entries - for receipt of funds on the account. The amount is indicated at the nominal value, in monetary units with two digits after a comma.

ANNEX V: INTERNATIONAL TRANSACTION REPORTING SYSTEM (ITRS)

12	Amount in soms	The equivalent amount in soms at the NBKR's discount rate as of the date of entry of transactions in the bank accounting. The amount is indicated in monetary units with two digits after comma.
13	Amount in US dollars	The equivalent amount in US dollars at the NBKR's discount rate as of the date of entry of transaction in the bank accounting. The amount is indicated in monetary units with two digits after the comma.
14	Transaction	Full information is given herein to indicate the destination of each transfer of funds. Information in this column should not repeat transactions already entered into the standard balance of payments classification, it should give contents of each specific transaction. It is required for exercising control over the correctness of the codification of transactions. Therefore such explanations as "financial services", "other business services", "export of goods" do not meet the reporting completeness requirements. When indicating the transfer of funds as a payment for the delivery of goods, a specific commodity should be indicated in the presence of such information.

In addition to the PB-1 form information on the balances at the beginning and at the end of the accounting month is provided in writing. These data should correspond to the data on the balances at the beginning and at the end of the period entered in the PB-1 form reports. Additionally, the reports are submitted according to the following forms:

- PB-1K – information on the balances on the correspondent accounts with foreign banks.
- PB-1H – information on the balances in foreign currency in cash available in the cash office.
- PB-1C – information on the balances on the accounts in soms of nonresident clients.

ANNEX VI: EXTERNAL DEBT RATIO-SPECIFIC CALCULATION

External debt (EDT) - the aggregate of debt liabilities to nonresidents to be repaid in foreign currency, goods or services.

Disbursed resources (DISB) - use of the resources from total credit guarantees of a creditor for the reporting period.

Amortization payments (AMT) - payments in foreign currency, in goods or services as repayment of principal debt for the reporting period.

Interest payments (INT) - actual interest payments in foreign currency, in goods or services for the reporting period.

External debt service (TDS) - amortization and interest payments to be made by the borrower.

Write-off (WRITE-OFF) - cancellation of outstanding debt.

Total external debt of the Kyrgyz Republic is determined as the aggregate of state external debt, private external debt, and debt on IMF loans.

$$EDT = EDT_G + EDT_P \quad (1)$$

Where, EDT_G is the *State external debt* - foreign liabilities of the Government of the Kyrgyz Republic including IMF loans plus foreign liabilities of individual borrowers, guaranteed by the Government of the Kyrgyz Republic. It is calculated based on the data from the Ministry of Finance of the Kyrgyz Republic and internal sources of the National Bank of the Kyrgyz Republic.

EDT_P - *Private external debt* - foreign liabilities of individual borrowers, not guaranteed by the Government of the Kyrgyz Republic. It is calculated based on the data of private enterprises, which attracted credit resources not guaranteed by the Government of the Kyrgyz Republic.

The volume of external debt at the end of the reporting period is defined according to the following formula:

$$EDT_t = EDT_{(t-1)} + DISB_t - AMT_t - WRTOFF_t \quad (2)$$

Where, $EDT_{(t-1)}$ - volume of external debt at the end of the previous period;

$DISB_t$ - resources actually received in the reporting period t;

AMT_t - amortization payments actually made in the reporting period t;

$WRTOFF_t$ - principal written off in the reporting period t;

Data on external debt are used to calculate parameters necessary for the analysis of the external economic position of the country:

$(EDT/GDP) \times 100\%$ - the ratio of total external debt to the gross domestic product;

$(EDT/XGS) \times 100\%$ - the ratio of total external debt to export of goods and services;

$TDS_{prg} = AMT_{prg} + INT_{prg}$ - scheduled payments as total external debt service;

$TDS_{act} = AMT_{act} + INT_{act}$ - actual payments as total external debt service;

$K_{prg} = \frac{TDS_{prg}}{XGS}$ - ratio of scheduled external debt service, where XGS is export of goods and services;

$K_{act} = \frac{TDS_{act}}{XGS}$ - ratio of actual external debt service;

These parameters allow the assessment of the debt burden of the country or its debt service ability. The debt burden and ability to serve it are measured by the share in currency receipts of the country and in the volume of production.

ANNEX VII: ESTIMATION OF INTERNATIONAL INVESTMENT POSITION METHODOLOGY

Balance of international investment, in accordance with the fifth edition of the IMF Guide on Balance of Payments, represents a statistical report, which reflects the accumulated stock of foreign assets and foreign liabilities of the country on a particular date (for example, at the end of the year) as well as their changes (flows) as a result of financial transactions, price changes, re-estimations and other adjustment calculations.

The balance of international investments consists of two basic classification groups: foreign assets and foreign liabilities of the Kyrgyz Republic. The including items of these groups correspond to the items of the financial account of the balance of payments and reflect functional categories. The data of sections «Assets» and «Liabilities» give the size of foreign assets and foreign liabilities of the Kyrgyz Republic, their composition and reasons for changes in the observed period.

The net international investment position of the country represents the difference between its foreign assets and liabilities.

The international investment position is published in a table in the following form:

Variables	The remain at the beginning of the year	Changes due to the operations conducted	Price change	Exchange rate change	Other changes	The remain at the end of the year
A	1	2	3	4	5	6
A. Assets						
B. Liabilities						
C. Net international investment position						

In the rows, the data on the basic classification groups are shown as foreign assets and foreign liabilities of the Kyrgyz Republic. The items of these groups correspond to the items of the financial account of payment balance and reflect the functional categories.

The assets are subdivided into direct investments, portfolio investments, financial derivatives, other investments and reserve assets; the similar classification is applied to liabilities (excluding reserve assets).

The columns of the examined table show the factors causing changes in the components of the balance of international investments during the observed period.

In columns 1 and 6 the stock of foreign assets and liabilities is reflected as the stock at the beginning and at the end of the period.

Column 2 shows the changes as a result of the real operations and financial components of international investment position.

Columns 3 and 4 reflect the cost estimations of foreign assets and liabilities due to price changes and exchange rate fluctuations.

All other changes are reflected in column 5, for example:

- change in classification (for example, shifting from portfolio investments to direct investments due to an increase in the investor's share in the stock capital of the firm);

- unilateral cancellation of debts by creditor;
- other changes.

Data on the international investment position is important for an analysis of external economic relations of the country; it allows to depict the volume foreign assets and liabilities of the Kyrgyz Republic, their composition and reasons for changes in the observed period.

The net international investment position of the country is used to define developments and tendencies in foreign economic relations of the given country with other countries in the world.

A deficit or a surplus of the net international investment position describing a ratio between the country resources and its debts to other states, reflects the status of the country as either a «net creditor» or a «net debtor», which plays an important role in government economic policies (development and realization of economic stabilization programs, definition of the need for financing).

Calculation of the net international investment position allows to estimate a major macroeconomic indicator - the national wealth, whose size is defined by summing up the net international investment position and net non-financial assets of the country.

**ANNEX VIII: ECONOMY OPENNESS AND FOREIGN TRADE CONCENTRATION
CALCULATION TECHNIQUE**

The openness of the economy is assessed, according to the NBKR method, as the ratio of the average external trade turnover value of the republic to the gross domestic product. The economy openness assessment formula applied by the National Bank is as follows:

$$Opns = \frac{(Ex + Im)}{GDP}$$

Where, Ex – export of goods at f.o.b prices,

Im – import of goods at f.o.b. prices

GDP – the gross domestic product

The concentration ratio is calculated as a square root of the sum of squared ratios of the volume of country – specific export-import transactions (types of products) to their cumulative volume. Geographical or commodity concentration of foreign trade is calculated according to the following formula.

$$K = \sqrt{\sum_{i=1}^n x_i^2}$$

Where,

K – the ratio of the concentration

x_i – volume of exports (imports) of the good I or export (import) to (from) the country (ies) i

X – the total volume of exports and imports of Kyrgyzstan

The increase in the concentration ratio means the reduction of the number of countries (types of products), or the increase in the share of some of the countries (types of products) in the total volume.
